AI-powered Digital Assistants in Healthcare - Closer to your patients anytime and anywhere through omni channels

Patients contact hospitals to learn about a consulting services, appointments or for registration. Hospitals must make this process of communication seamless and efficient by using omnichannel digital assistants.

Connect with the patients in the way they prefer and through the channel they are comfortable with.

What is AI-Powered Digital Assistants?

24/7 one-to-one assistance and guidance though website, mobile app, WhatsApp, Facebook or any other social channels. They provide sustainable services by engaging in natural conversations. They can also predict patient behaviors. They can also be integrated with internal systems like HIS to reduce the response time to patients

Leverage 10xDS' AI powered Digital assistant solutions to improve patient engagement and more

Preliminary Diagnosis

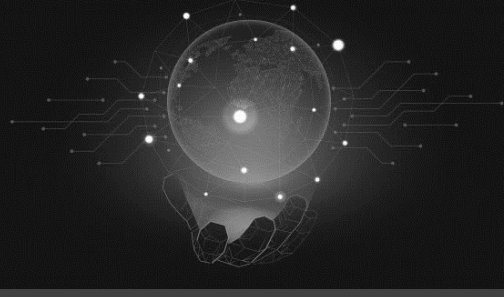

Registration and appointments
